Professional Summary

Senior iOS Engineer with 10+ years building high-quality, production-grade consumer and banking apps used by millions of users, with deep expertise in Swift, SwiftUI, UIKit, Combine, async/await, and modern iOS architectures. Strong track record of designing modular, scalable app architectures (Clean Architecture, MVVM, VIPER) and reusable component libraries that support multiple squads and domains.

Led small team of front-end engineers, partnering closely with product, design, and backend teams from wireframes and prototypes through implementation, performance tuning, and release. Hands-on experience driving performance, reliability, and maintainability through profiling, test automation, and code quality practices.

Comfortable leading squads, mentoring engineers, and owning end-to-end delivery including API contract definitions, CI/CD pipelines, release processes, and observability, while maintaining a strong focus on user experience, accessibility, and consistency.

Technical Skills

iOS Development: Swift, SwiftUI, UIKit, Combine, async/await, GCD, Storyboards/XIBs, Auto Layout

Architecture: Clean Architecture, MVVM, VIPER, modularisation, feature modules, reusable UI frameworks, SOLID principles, design patterns (Coordinator, Dependency Injection)

Testing & Quality: XCTest, XCUITest, UI Automation, Snapshot Testing, test plans, code coverage reporting, test automation strategies, quality gates

Performance & Reliability: Xcode Instruments (Time Profiler, Allocations, Leaks), app launch optimisation, memory profiling, crash analysis, logging and observability practices

Dependency Management: Swift Package Manager (SPM), CocoaPods, Carthage, xcframeworks

Backend & APIs: RESTful APIs, JSON, API contract definition, request/response modelling, debugging integration issues, basic backend enhancements (Node.js/TypeScript)

CI/CD & DevOps: Xcode, TestFlight, Fastlane, Jenkins, Bitrise, GitHub Actions, Travis CI, build automation, code signing & provisioning, artifact management, release pipelines

Leadership & Collaboration: Squad leadership, technical direction, mentoring, code reviews, cross-team alignment, stakeholder communication, roadmap input

SDLC: Change Request (CR) process, impact assessment, Agile/Scrum, release management

Professional Experience

DBS Bank

June 2023 – Present

Senior Software Engineer – Mobile iOS Team

Singapore

- iOS and hybrid (React + Native) UI/UX development for the DBS mobile app, delivering pixel-perfect, production-grade experiences across 15+ banking features used by millions of customers.
- Defined and implemented a modular architecture for mobile UI, creating reusable Swift/SwiftUI and React component libraries and design tokens that scale across 5+ domains and multiple squads.
- Adopted modern Swift concurrency patterns (Combine and async/await) for key workflows, simplifying asynchronous code paths, improving responsiveness, and reducing callback complexity.
- Worked end-to-end from Figma/Sketch wireframes to implementation, helping refine UX flows, micro-interactions, and accessibility, and ensuring consistency with the global design system.
- Built and evolved a cross-platform design system with reusable UI components in Swift and React, standardising layout rules, typography, and interaction patterns to reduce design and dev divergence.
- Optimised UI performance using Xcode Instruments (Time Profiler, Allocations, Leaks), significantly improving app launch time and memory usage across core banking journeys.
- Led Xcode 14–16 migration and Swift/SwiftUI modernisation, resolving unit test and dependency compatibility issues and keeping Objective-C, Swift, and React modules stable across toolchain upgrades.
- Collaborated with backend teams on microservices, refining REST contracts, defining request/response models, debugging integration issues, and contributing small backend enhancements to support new iOS and React flows.
- Established and maintained CI/CD pipelines using Jenkins, AWS, GitHub Actions, and Fastlane, automating builds, tests, static checks, code coverage reports, and release pipelines with minimal manual intervention.
- Strengthened testing culture by promoting XCTest, XCUITest, and UI testing, integrating tests into pipelines, and enforcing code coverage and quality gates for critical flows.
- Mentored a team of 5 developers on SwiftUI, React, Clean Architecture, and design system adoption, performing regular code reviews and driving engineering best practices across squads.

- Implemented security measures including SSL pinning, biometric authentication (Touch ID/Face ID) flows, and secure session management to meet banking compliance requirements.
- Owned full SDLC for key initiatives, including CR impact assessments, testing strategy, UAT planning, production rollout, and stakeholder communication across product, design, and operations.

foodpanda

March 2020 – May 2023

Senior Software Engineer – Offers and Experience team

Singapore

- Worked as a Senior iOS engineer for a high-traffic consumer food delivery app serving 5M+ users across APAC, with focus on marketing campaigns, offers, and real-time order tracking experiences.
- Designed a modular MVVM architecture using Combine and dependency injection, enabling parallel feature development across an 8-member team while maintaining consistency and reusability.
- Introduced structured concurrency (Combine and early async/await adoption where applicable) into networking and data pipelines, simplifying async handling and improving reliability.
- Implemented comprehensive test automation strategy with XCTest and UI automation, achieving around 85% code coverage for critical journeys and reducing regression bugs by approximately 60%.
- Built and maintained iOS CI/CD pipelines with Bitrise and Travis CI, automating unit/UI tests, static checks, and TestFlight releases, and monitoring pipeline health for frequent production deployments.
- Created a reusable UI component library (Swift + Objective-C via Carthage and xcframeworks) to share components across multiple product domains and apps.
- Prototyped fraud and abuse monitoring views on top of tracking and promo usage data, enabling operations teams to detect suspicious order and rider patterns more quickly.

DBS Bank (via Altimetrik)

August 2018 – January 2020

Senior Software Engineer – iOS Development

Hyderabad, India

- Played a key role in digital transformation from a Kony hybrid framework to native iOS, migrating the codebase to Objective-C and Swift and building modules for fund transfers, bill payments, and account management used by 3M+ customers.
- Implemented biometric authentication UI flows and secure session management using Keychain and Touch ID/Face ID, forming a foundation for subsequent mobile security initiatives.
- Collaborated with security teams to design a reusable mobile security framework prototype (jailbreak detection, device integrity checks, API misuse safeguards) for banking apps.
- Managed Jenkins CI/CD pipelines for automated builds and regression suites, ensuring pipelines remained stable and aligned with evolving platform requirements.
- Created reusable UI component libraries and patterns to keep the banking experience consistent across multiple features and teams.
- Conducted technical interviews and worked with leadership to build and scale the new DBS iOS mobile team in Hyderabad, helping hire and mentor multiple senior and mid-level developers.

AgreeYa Mobility (Quest Global)

December 2017 – July 2018

Senior Software Engineer

Pune, India

- Developed an iOS framework for Apple CarPlay integration with custom UI for vehicle head unit communication, focusing on safe, responsive in-vehicle interactions.
- Built product from scratch with Bluetooth connectivity and Siri integration, and adapted C++ libraries into Swift/Objective-C compatible frameworks for reuse.
- Explored anomaly detection on vehicle and connection logs to improve stability and inform future AI-powered diagnostics and observability strategies.

Webdunia India Pvt Ltd

July 2015 – December 2017

iPhone Developer

Indore, India

- Built news and media iOS applications focused on content streaming, offline reading, and push notifications, modernising older Objective-C apps into Swift.
- Implemented multimedia playback UI using AVFoundation and optimised image loading and caching, reducing bandwidth consumption on low-connectivity networks.
- Managed full SDLC for multiple apps, including client communication, UX discussions, requirements, implementation, App Store publishing, and post-launch maintenance.

AI & Research-Oriented Projects

- **Fraud Call Detection MVP:** Designed a proof-of-concept fraud call detection flow for a mobile banking context by combining call metadata, behavioural signals, and AI-assisted heuristics, with dashboards to inspect flagged interactions and tune thresholds.
- **Mobile Security Framework for Banking Apps:** Architected a reusable mobile security framework (device integrity, jailbreak/root checks, secure networking patterns) and used AI tools to generate threat models, test cases, and refactoring suggestions.

Education

RSR Rungta College of Engineering and Technology
Bachelor of Engineering in Information Technology

2011 – 2015

Key Achievements & Awards

- **Most Dependable Award (DBS 2023–Present):** Recognised for reliability, knowledge sharing, and cross-squad support on critical banking journeys.
- **Altimetrik Gem Award (2018–2019):** Helped establish the core DBS iOS team in Hyderabad with timely deliveries and high-quality native implementations.
- Led modular architecture and React/Native hybrid framework adoption across 5+ domains, enabling scalable, shared UI development for the DBS mobile app.
- Maintained 99.9%+ crash-free rate for production applications serving millions of users through disciplined testing, monitoring, and iterative hardening.
- Spearheaded Swift/SwiftUI modernisation and Xcode migrations, reducing technical debt and improving developer productivity and build stability.
